TriTex – Waterproof, windproof and breathable liner.

Connection zipper for attachment to any Triumph jean.

3M® anthracite night reflective piping and inserts.

TriTex is a performance membrane developed by Triumph, offering high performance waterproof, windproof and breathable technology to a number of our products. TriTex is a porous membrane that offers high levels of waterproof protection against the elements while the windproof properties protect against the wind-chill.

All of our leathers are sourced from high quality, free range livestock that are reared in natural surroundings away from barb wire fencing that may damage the hide. The majority of our leathers are sourced from Brazil and are given different treatments and finishes dependent on the product they will be made in to. For example, for sports products we generally use Monaco or Carbon leather which has a more consistent grain texture while our classic leather products use drum dyed or washed leathers for a more heritage feel.
