TRIUMPH

DuPont Teflon®
Fabric protector is applied to the outer fabric to increase the garments protection from water, dirt and stains.

3M® Night Reflective
The base construction of the reflective fabric allow light sources such as car headlights to bounce back off the fabric and illuminate.

AirFlow Tech Ventilation.

Connection zipper for attachment to any Triumph jean.

Superfabric® ceramic laminated panels in impact zones. Superfabrics are highly technical fabric applications that can be found on garments like the Navigator Jacket. Offering higher levels of abrasion resistance, tear strength and stain resistance than standard base fabrics.

AirFlow Tech Ventilation.

Superfabric.

Removable CE certified Knox® protectors – shoulder, elbow and back.

AirFlow Tech Ventilation.

Outlast®
Temperature Regulating Technology is renowned world wide as the product for temperature regulation. Initially cool to touch the Outlast® microcapsules absorb excess heat. Stored heat is released back to the body as required resulting in a constant microclimate. Not too hot, not too cold, just right™.

Sympatex®
The Sympatex membrane is a 5mm thick membrane that is laminated on a textile base, providing apparel with protection against moisture. The hydrophilic (water-attracting) elements of the Sympatex membrane absorb moisture (transpiration) in the form of vapour from the body and transport it from the inside to the outside.
